Xiaowei Guo

Technical Systems Designer

guoxiaowei723@gmail.com | Portfolio: xiaoweii.github.io/Guo-Web | linkedin.com/in/xiaowei-guo

+1 765-701-8635 | Los Angeles, CA (open to relocate)

Technical systems designer with an Applied Mathematics B.S. and a Game Design M.S., focused on combat AI and interconnected gameplay systems in Unity/C#, working across gameplay scenarios, narrative sequences, and AI behaviors in one role. At NetEase, designed and tuned NPC and bot combat AI across four encounter types and shipped narrative content on the live MMORPG *Revelation*; now solo-developing a Unity management sim connecting economy, resource-management, and relationship systems.

Skills

Game Systems Design: combat AI design across four encounter types · bot behavior tuning · resource economy · progression and needs loops · rapid prototyping (digital and tabletop)

Technical Design: Unity/C# implementation · behavior trees and state machines · data-driven design · save-forward data architecture · design documentation

Engines and Tools: Unity · Unreal · C# · Python · Figma · Excel/Sheets systems modeling

AI Systems (differentiator): multi-agent character systems · LLM prompt guardrails · agentic tool use

Languages: Chinese (native), English (fluent)

Education

Northeastern University | M.S. - Game Design **Sep 2023 – Dec 2025**

Purdue University | B.S. - Applied Mathematics **Sep 2018 – Jun 2023**

Work Experience

NetEase Games | *Game of Thrones: Winter is Coming*, strategy MMO | AI Designer **Aug – Sep 2024**

- **Designed** and tuned NPC and bot combat AI — decision logic, threat evaluation, and combat pacing across four encounter types — with the goal of making bot behavior read more like human play.
- **Designed** behavior trees for AI-controlled teammates on a second title, an Overcooked-style co-op cooking mobile game.
- **Implemented** behaviors in Unity and C# and completed design–test–iteration cycles inside NetEase's production pipeline.

Cuboid.AI (DraMai) | AI interactive drama | AI Game Designer | Burlingame, CA **Apr – Jul 2025**

- **Designed** multi-agent interactive narrative systems with emotional logic, role constraints, conflict rules, prompt guardrails, and player-influence paths, balancing character autonomy with narrative control.

Petch | gamified social pet app | Game Designer | Irvine, CA **Jul 2025 – Present** ***Product***

- **Designed** 16 MBTI-based pet archetypes and a roguelike PvP mode on a 16-tile match mechanic; prototyped in Unity/C# and iterated with ~1,000 playtesters.

NetEase Games | *Revelation*, mobile MMORPG | Narrative Designer **Jan – Mar 2021**

- **Developed** the character kit and narrative arcs for one faction of a shipped mobile MMORPG, aligning abilities, story, and worldbuilding through Twine and in-house scripting tools.

Project Experience

Home-Kitchen Management Sim | Solo Designer & Developer (in development) **2025 – Present**

- **Designed** a Unity management sim connecting economy, resource-management, and relationship systems — solo design and implementation with outsourced art; playable demo nearing completion.

Life Portal — Agentic AI Companion | Solo Designer & Developer **2025 – Present**

- **Designed** and built a dual-persona AI companion end to end: 7 tool integrations, long-term memory, tiered permissions, and a full voice loop.

Beneath the Ruins and **Falling Kingdom** | physical board games | Designer — designed core rules and paper prototypes for two produced board games, balanced through table playtests.
